Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Prior Art (APA hereinafter, Figure 1) in view of Niboshi et al (US 6198215).

APA discloses a reflective LCD device comprising all claimed limitations except the antireflection layer having particular characteristics such as a double layer of a metallic film and a silicon oxynitride film.

Niboshi discloses antireflective film comprising a metallic film and a silicon oxynitride film, wherein the refractive index ranges from 1.8 to 3.2 (meeting/overlapping Applicant's range of 1.7-1.9) and 40-60 nm (meeting Applicant's range of 400- 600 Angstroms). Niboshi discloses that such antireflective film achieves advantages such as the intensity of reflected light can be sufficiently suppressed. Therefore, it would have been obvious to one of ordinary skill in the art to employ the antireflective film comprising particular characteristics such as a metallic film and a silicon oxynitride film, the refractive index ranges from 1.8 to 3.2 (meeting/overlapping Applicant's range of 1.7-1.9) and 40-60 nm (meeting Applicant's range of 400- 600 Angstroms), for achieving advantages such as the intensity of reflected light can be sufficiently suppressed.

Niboshi discloses several metallic materials such as Mo, Al, Ta, Ni (Ti would appear to be at least functionally-equivalent to one of these metallic materials).

Art Unit: 2871

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
